

SCOTLAND'S OVERCONSUMPTION IS CAUSING CLIMATE CHAOS.

The good news is that we now have the best possible opportunity to change this, as the Scottish Government is **creating a new law to transform the way we use materials.**

We need a **circular economy** where materials are properly valued and cycled round the economy as much as possible.

We need policies which encourage producers to make products that **last for longer**, make them **easy to repair** and use materials that are **better for the planet.**

THIS WILL ONLY HAPPEN WITH PUBLIC PRESSURE.

Take action!
